HOSTING A GAME ON AWS

OVERVIEW

- EC2 Instance: Ubuntu-based, running the web server
- Docker: Used to initialize and run the site inside a container via SSH terminal
- Elastic IP: Static IP assigned to the EC2 instance for consistent access
- PostgreSQL: For Login/Signup

SECURITY & DOMAIN SETUP

- Security Groups: Opened ports 22 (SSH), 80 (HTTP), and 443 (HTTPS)
- SSL + DuckDNS: Used DuckDNS for a free dynamic domain and enabled HTTPS using Let's Encrypt on an nginx-based Ubuntu server

STATIC ASSETS & CDN

- S3 Bucket: Used to store static assets like images, JS, and CSS
- CloudFront Distribution: Added for global CDN, caching, and performance improvements
